Microsecond Timer

Lightweight and easy to use.
A simple assessment tool that fits in your pocket

The FAKOPP Microsecond Timer is a rapid tree safety assessment tool, that works in conjunction with a mobile app to help you investigate tree defects.

Testing takes a matter of seconds even on large diameter trees, with no heavy equipment or computers.

Using just two sensors specially designed to allow the tree to repair quickly making it safe, fast and effective.

The Microsecond Timer, presents the time taken for a sound wave to travel between probes , simply put:

Short time = Normal Tree

Long time = Defective Tree

The Microsecond Timer is prefect for individual, walk through risk surveys and climbing inspections.
